Surveyor 2 & Verizon MiFi Device

Date: Tuesday, April 3, 2018

Our customer support has identified a wireless incompatibility between our Carlson Surveyor 2 and the newer Verizon MiFi devices when using the Data Collector Internet feature on SurvCE.

The Verizon MiFi7730L – 632A model has shown incompatibility in field testing.

Some older Verizon MiFi devices work reliably, but these are no longer available at the local Verizon stores.

Services from other cellular providers function as normal with the Carlson Surveyor 2.

If you have further questions, please contact your Reseller, Carlson Sales Manager or Carlson Technical Support.

Yours respectfully
Carlson Software Inc.
